PROJECTS

- To create a photography website using Html and CSS**  
The website showcases photography portfolios, providing an online space for photographers to display their work and engage with potential clients and collaborators.  
A clean, minimalistic design ensures images are the focus, using a simple layout with intuitive navigation for easy exploration of the photographer’s portfolio.  
The site is fully responsive, ensuring an optimal viewing experience across devices, from desktops to smartphones, making it accessible anytime, anywhere.  
A dynamic image gallery features categorized photo collections, with options for zooming, viewing in full-screen mode, and easy navigation through images.  
Includes a section to introduce the photographer, highlighting their experience, artistic style, and achievements, providing visitors with insight into their background.  
A simple contact form allows potential clients to reach out for inquiries or bookings, offering a straightforward way to initiate communication.
